

Leading consulting company for Electrical Design protects sensitive data with My Endpoint Protector

PROFILE

Industry

Engineering

The Challenge

Controlling the use of removable devices and the upload of data on the internet

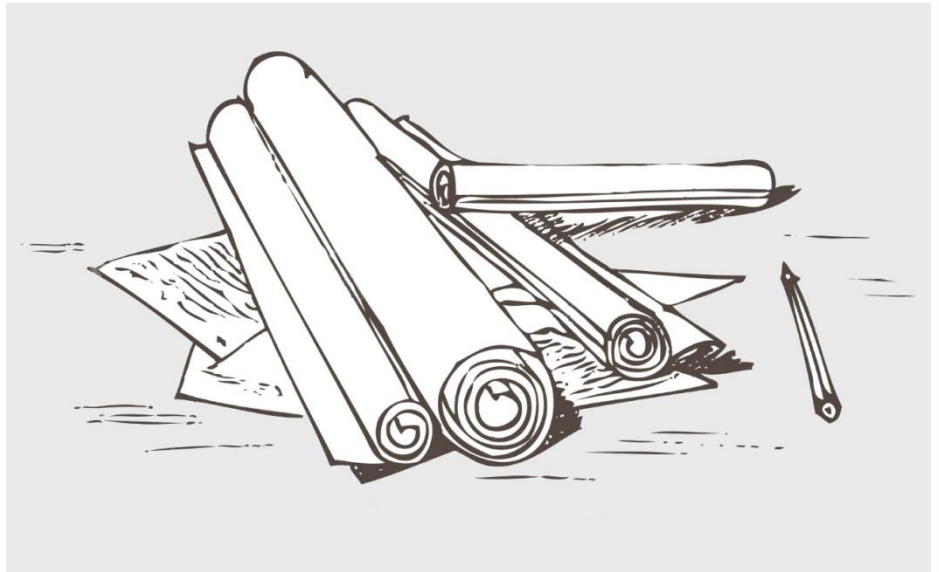

The Solution

My Endpoint Protector

Why My Endpoint Protector?

- Best solution for the BYOD and DLP policy
- Strong Device Control and Content Aware Protection features
- Ease of installation
- Great support services

Artı Uç controls the BYOD policy and data leakage with Content-Aware DLP and MDM from My Endpoint Protector

About Artı Uç

Artı Uç is a Electrical Design company in Turkey which delivers engineering and consultancy services in Electricity generation and distribution systems, industrial systems, area research and feasibility.

Their main services are: Engineering Services (Primer design, Short circuit calculation, Grounding system design and calculation, Project acceptance and approval works) and Consultancy Services (Project control, Area research, Project development, Reporting, Preparation of technical specification Attendance to meetings and acceptance tests).

The Challenge

Engineering companies heavily rely on their intellectual property (IP) and know-how. If lost or leaked, data can end-up in competitors hands, endangering their position on the market. For Artı Uç the risk was represented by sensitive file uploads to online applications and transfers to removable devices, as well as the sensitive data residing on mobile devices, with no control from the IT department.

Data Security Care

"We opted for My Endpoint Protector from all the solutions we tried so far because it best suited our needs."

Umut Çetin,
Company Director
Artı Uç

The Solution

Artı Uç evaluated My Endpoint and chose to implement the full DLP and MDM solution, to take advantage of the complementary features and to protect all their workstations, computers and mobile devices.

The Device Control feature helped them to control all the device activity inside the network from a simple Web interface for a safer working environment. The Content Aware Protection feature addresses the risk of data leakage through file uploads to the cloud through different content filters offering them detailed control over sensitive data leaving the company's network. Additionally, the MDM module helps them secure data on iOS and Android mobile devices.

"We opted for My Endpoint Protector from all the solutions we tried so far because it best suited our needs. We consider that the control panel is useful and we can control everything with My Endpoint Protector which is very important to us," said Umut Çetin, Company Director of Artı Uç.

My Endpoint Protector rating on a scale from 1 to 5 (one being "poor" and five being "excellent"), was 4.4 in average, with the highest points offered for features, easy of installation, support and updates and availability of staff when calling or asking for assistance. The IT Manager was very pleased with our support team because of the fast information process and quick responses.

About My Endpoint Protector

My Endpoint Protector is a full Device Control, Data Loss Prevention (DLP) and Mobile Device Management (MDM) cloud-based solution available for Windows, Mac OS X and iOS and Android mobile devices. Portable storage devices such as USB flash drives, gadgets / tablets, e-mail applications like Outlook and Gmail and cloud services like Dropbox, iCloud, Google Drive, etc. may cause severe issues when it comes to controlling use of confidential data. With My Endpoint Protector you can minimize the risks of data loss, data theft and data leakage and also manage the mobile device fleet from a single centralized online console from anywhere, at anytime.
